

RENDIMENSION

Master Decision Report: Facebook Campaign Strategy

Date	March 17, 2026
Market	United States (National)
Prepared For	Hugo Ramirez, Founder
Status	Intelligence Phase Complete - NO ADS YET
Sources	Facebook Ad Library, Ubersuggest, Ahrefs, AnswerThePublic

Purpose: This report consolidates competitive intelligence, Facebook Ad Library analysis, and search demand research across ALL Rendimension services. It provides a data-backed recommendation on which services to lead with in Facebook advertising and which to avoid.

TABLE OF CONTENTS

1. Executive Summary - The 30-Second Verdict
2. Real Client Types & Strategic Umbrellas
3. Facebook Ad Library Audit - Full Results
4. Search Demand Analysis - Volume Data
5. Service Decision Matrix
6. Why Facebook Demand Generation Works Here
7. Competitor Landscape - Who Is Actually Advertising
8. Final Recommendations & Next Steps

1. EXECUTIVE SUMMARY

The Verdict: Rendimension should NOT compete in the saturated '3D rendering services' category on Facebook. Instead, it should own the blue ocean of **pre-construction sales visualization, investor presentation packages, and experiential/luxury space visualization** - three territories where Facebook ad competition is literally ZERO and the ticket size is 5-20x higher.

Key Findings:

- The generic '3D rendering' Facebook ad space is dominated by AI tools (Archsynth, mnml.ai, ArchFine) - NOT render studios. Premium studios do not advertise on Facebook.
- For 'pre-construction marketing visualization' there is exactly 1 active ad in all of Facebook (The Render Pros). For 'investor presentation real estate rendering' there are ZERO.
- Search volume for these niche services is low (10-140/month) BUT CPC is high (\$34.67) confirming commercial intent. Each lead is worth \$10K-\$100K+.
- Facebook is a demand generation platform, not a search platform. The relevant question is NOT 'do people search for this?' but 'can we reach the right decision-makers?' The answer is yes - there are 200,000+ architects and 500,000+ developers in the US.
- Every competitor says the same 3 things: 'photorealistic,' 'fast turnaround,' 'bring your vision to life.' Nobody talks about business outcomes. This is the gap.

2. REAL CLIENT TYPES & STRATEGIC UMBRELLAS

Based on Rendimension's actual client history, these are the real client profiles mapped to strategic service categories. This is NOT theoretical - these are clients Hugo has served.

Real Client Type	Strategic Umbrella	FB Ad Saturation	Ticket
Retail chains expanding/opening new store locations	Pre-Construction Sales Viz	ZERO	\$10K-\$50K+
Developers buying/flipping RV resorts, hospitality, commercial	Investor Presentation Packages	ZERO	\$15K-\$75K+
Large clients developing shopping centers	Pre-Construction + Experiential	ZERO	\$15K-\$100K+
Architects/developers not tech-savvy, need creative help	Risk Reduction / Decision Support	ZERO	Value-based
Developers wanting VR walkthroughs to verify construction	Risk Reduction / Decision Support	Minimal (CloudPano)	\$10K-\$50K+

Key Insight: Every single real client type maps to a service category where Facebook ad saturation is ZERO or near-zero. This is not coincidence - it confirms that the premium, decision-support end of the market is completely unserved by advertising.

3. FACEBOOK AD LIBRARY AUDIT

Live search of Facebook Ad Library (US, All Active Ads) conducted March 17, 2026. Each of Rendimension's services was searched independently.

Search Term	Results	Who Is Advertising	Signal
architectural visualization	~83	AI tools dominate (Archsynth, mnml.ai, ArchFine)	SATURATED
3D rendering services	Noise	Mostly irrelevant results, outsource shops	AVOID
pre-construction marketing visualization	~1	Only The Render Pros	BLUE OCEAN
investor presentation real estate rendering	0	Nobody	BLUE OCEAN
virtual walkthrough real estate	~27	Real estate agents (not studios)	OPEN
luxury showroom visualization design	~160	Flooring companies, unrelated	OPEN
virtual reality real estate experience	Moderate	RE agents, not viz studios	OPEN
3D walkthrough animation architecture	Low	Westgate Koenig (interesting)	OPEN
360 virtual tour property	Moderate	CloudPano dominates (SaaS)	NICHE
3D floor plan services	Low	RealSee AI, realtors	OPEN
product visualization 3D rendering	Low	ReRender AI, education	OPEN
VR training simulation corporate	~170	Sports VR (unrelated)	WRONG FIT
architectural drafting CAD services	~5	HS 3D India	TOO NICHE
sell property before construction rendering	~190	Local news, remodelers (not studios)	BLUE OCEAN

Top Competitors Found in Ads:

Company	Ad Count	Running Since	Positioning	Threat Level
Archsynth (AI tool)	~350	Jun 2025	AI-generated renders in seconds	LOW (different market)
The Render Pros	Few	Active	Business-outcome: "sell before built"	MEDIUM (only one doing it right)
mnml.ai	Moderate	Active	AI interior design tool	LOW (different market)
CloudPano	Dominant	Active	360 virtual tour SaaS	LOW (SaaS, not service)

4. SEARCH DEMAND ANALYSIS

Search volume data from Ubersuggest, Ahrefs Free Keyword Generator, and AnswerThePublic (paid). All data for United States, English, March 2026.

Keyword	Volume/mo	CPC	Intent	Source
3D rendering for real estate	140	\$34.67	Commercial	ATP
virtual reality real estate	320	-	47% Commercial	Ubersuggest
architectural visualization services	>100	-	Commercial	Ahrefs
project rendering	70	-	Mixed	Ubersuggest
what is rendering in construction	50	-	Informational	Ubersuggest
new construction renderings	40	-	Commercial	Ubersuggest
pre construction rendering	10	-	40% Commercial	Ubersuggest

What This Means:

Search volumes are LOW across all visualization services. But this is misleading for 3 reasons:

- **High CPC = High Value:** \$34.67 CPC means each click is extremely valuable. These are not casual browsers - they are decision-makers with budgets.
- **Clients search for PROBLEMS, not solutions:** A developer does not search 'pre construction visualization.' They search 'how to sell condos before construction' or 'pre-sale marketing strategy.' The demand exists under different keywords.
- **Facebook is not Google:** On Facebook, you do not capture existing search demand. You GENERATE demand by showing decision-makers a solution they did not know existed. Search volume is irrelevant for Facebook strategy.

5. SERVICE DECISION MATRIX

Final decision matrix combining ad saturation, search demand, ticket size, differentiation potential, and Facebook audience availability.

Service	Ad Saturation	Search Vol	Ticket	FB Audience	VERDICT
Pre-Construction Sales Visualization	ZERO	Low	\$10K-\$50K+	Huge	TOP PICK
Investor Presentation Packages	ZERO	Very Low	\$15K-\$75K+	Huge	TOP PICK
Experiential / Luxury Space Viz	ZERO	Very Low	\$15K-\$100K +	Large	TOP PICK
Risk Reduction / Decision Support	ZERO	Low	Value-based	Large	TOP PICK
VR Construction Walkthrough	Low	320/mo	\$10K-\$50K+	Large	STRONG
Retail Store Design Viz	ZERO	Low	\$10K-\$50K+	Medium	STRONG
3D Rendering (generic)	HIGH	140/mo	\$500-\$3K	Saturated	AVOID
Architectural Visualization (generic)	HIGH	>100/mo	\$1K-\$5K	Saturated	AVOID
VR Training Simulation	Unrelated	170 noise	Variable	Wrong fit	AVOID

6. WHY FACEBOOK DEMAND GENERATION WORKS HERE

The critical insight of this report: **low search volume + zero ad saturation is the PERFECT combination for Facebook demand generation.**

Google vs Facebook - Different Games:

Factor	Google Ads	Facebook Ads
How it works	Capture existing demand (people already searching)	Generate new demand (show people what they need)
Search volume matters?	YES - critical	NO - irrelevant
Targeting method	Keywords	Demographics, titles, interests, behaviors
Best for...	High-volume, known solutions	New concepts, education, premium services
Return on investment fit	Poor (low volume, high CPC)	Excellent (no competition, high ticket, visual product)

Facebook Audience Size (US estimates):

- Licensed Architects: ~200,000+
- Real Estate Developers/Investors: ~500,000+
- Construction Company Owners: ~700,000+
- Retail Chain Decision Makers (VP+): ~50,000+
- Hospitality/Hotel Owners & Operators: ~80,000+
- Commercial Property Managers: ~300,000+

Even if Facebook can reach just 10% of these professionals, that is 180,000+ potential decision-makers who have NEVER seen an ad for premium visualization services. One client from this pool = \$10K-\$100K+ in revenue.

7. COMPETITOR LANDSCAPE

Who Is Actually Competing (and who is NOT):

Rendimension's real competitors are NOT other '3D rendering' studios. They are creative agencies and pre-sale specialists. But critically - almost none of them advertise on Facebook.

Company	Type	FB Ads?	Positioning
Steelblue	Creative Agency	NO	Premium archviz for major developments
DBOX	Creative Agency	NO	Brand + visualization for luxury RE
Neoscape	Creative Agency	NO	Immersive experiences for developments
Transparent House	Studio	NO	High-end renders, website focus
The Render Pros	Pre-sale Specialist	YES	Business outcomes: "sell before built"

What The Render Pros Does Right (and how to beat them):

- They are the ONLY studio using business-outcome positioning in Facebook ads
- Their copy focuses on 'sell properties before they are built' - not 'photorealistic renders'
- They are small and have limited ad volume - easy to outspend and out-creative
- Rendimension can differentiate by: broader service range, VR capabilities, experiential viz, and stronger case studies (Miami warehouse, exotic car club, etc.)

What Everyone Gets Wrong in Their Ads:

- They talk about WHAT renders look like, not what renders DO for the business
- Same 5 hooks everywhere: 'photorealistic,' 'fast turnaround,' 'bring vision to life'
- Same CTAs: 'Get a free quote,' 'Contact us,' 'See portfolio'
- No urgency, no stakes, no social proof, no segment-specific messaging
- 90%+ are single-image portfolio shots with no storytelling

8. FINAL RECOMMENDATIONS & NEXT STEPS

Services to LEAD With (in order of priority):

#	Service	Why	FB Angle
1	Pre-Construction Sales Viz	Zero competition, proven demand (The Render Pros validates market), huge audience	"Sell 40% of units before breaking ground"
2	Investor Presentation Packages	Literally zero ads in all of Facebook, highest ticket, clear ROI story	"Close your next \$10M funding round with visuals that speak investor language"
3	Experiential / Luxury Space Viz	Zero competition, Hugo has case studies (Miami warehouse, car club)	"Your clients should FEEL the space before it exists"

Services to AVOID Advertising:

- "3D rendering services" - saturated by AI tools, low ticket, commodity positioning
- "Architectural visualization" - generic, high competition, everybody says the same thing
- "VR training simulation" - wrong market, sports VR dominates the ad space

Immediate Next Steps:

Step	Action	Phase
1	Run Positioning & Angle Strategist for top 3 services (segment-specific hooks, pain points, emotional triggers)	Phase 2
2	Run Creative Director for visual concepts and AI-ready image prompts per segment	Phase 3
3	Produce minimum 3 ad variants per service (carousel + single image + video/reel)	Phase 4
4	Build Meta campaign structure with proper audiences, budgets, and UTM tracking	Phase 5
5	Launch with 70/30 budget split (proven angles vs. test concepts)	Phase 6

Bottom Line: Rendimension has a rare opportunity. The premium end of the visualization market has ZERO Facebook advertising presence. Every competitor talks about what renders look like. Nobody talks about what renders DO for a business. Rendimension should own this gap with business-outcome positioning, targeting decision-makers who do not know they need this service yet. The data says: GO.
